

Carlos M. Isales, M.D.

Professor of Medicine and Cell Biology
Institute of Molecular Medicine and Genetics
Department of Medicine
Medical College of Georgia

Research Interests

Our laboratory is working to understand the hormonal links between nutrient ingestion and bone formation. We have identified several hormones of interest, in particular, glucose-dependent insulinotropic peptide, an enteric hormone that rises on nutrient ingestion and appears to be able to both stimulate bone formation and inhibit bone breakdown. We are using a variety of genetic models to study this link.
